Problem 1 Write an interpreter for the following language:

Syntax

$$\begin{array}{l} P \rightarrow E \\ E \rightarrow n \\ | \quad x \\ | \quad E + E \\ | \quad E - E \\ | \quad E * E \\ | \quad E / E \\ | \quad \text{iszero } E \\ | \quad \text{read} \\ | \quad \text{if } E \text{ then } E \text{ else } E \\ | \quad \text{let } x = E \text{ in } E \\ | \quad \text{letrec } f(x) = E \text{ in } E \\ | \quad \text{proc } x E \\ | \quad E E \\ | \quad E \langle x \rangle \\ | \quad \text{set } x = E \\ | \quad E; E \\ | \quad \text{begin } E \text{ end} \end{array}$$

Semantics

$$\begin{array}{lcl} Val & = & \mathbb{Z} + \text{Bool} + \text{Procedure} + \text{RecProcedure} \\ \text{Procedure} & = & \text{Var} \times E \times \text{Env} \\ \text{RecProcedure} & = & \text{Var} \times \text{Var} \times E \times \text{Env} \\ \rho \in \text{Env} & = & \text{Var} \rightarrow \text{Loc} \\ \sigma \in \text{Mem} & = & \text{Loc} \rightarrow \text{Val} \end{array}$$

$$\begin{array}{c}
