

Homework 2

COSE215, Spring 2016

Hakjoo Oh

Due: 4/12 (Tue), 09:00 (in class)

Problem 1 (10pts) Consider the following *extended* regular expression:

$$\begin{array}{l} R \rightarrow \emptyset \\ \quad | \epsilon \\ \quad | a \in \Sigma \\ \quad | R_1 + R_2 \\ \quad | R_1 R_2 \\ \quad | R^* \\ \quad | R^+ \\ \quad | R? \\ \quad | (R) \end{array}$$

The semantics of the regular expression is defined as follows:

$$\begin{aligned} L(\emptyset) &= \emptyset \\ L(\epsilon) &= \{\epsilon\} \\ L(a) &= \{a\} \\ L(R_1 + R_2) &= L(R_1) \cup L(R_2) \\ L(R_1 R_2) &= L(R_1)L(R_2) \\ L(R^*) &= (L(R))^* \\ L(R^+) &= L(R)L(R)^* \\ L(R?) &= \{\epsilon\} \cup L(R) \\ L((R)) &= L(R) \end{aligned}$$

Evaluate the following regular expressions according to the semantics. Show the full evaluation sequences. In all cases, assume $\Sigma = \{a, b\}$.

1. $L((a + b)^+ a)$
2. $L(((a + b)?)^*)$

Problem 2 (25pts, 5pts each) Find regular expressions for the following languages and explain why.

1. $L = \{w \in \{a, b, c\}^* \mid w \text{ contains at least one } a \text{ and at least one } b\}$
2. $L = \{w \in \{0, 1\}^* \mid \text{The fifth symbol of } w \text{ from the right end is } 1 \}$
3. $L = \{w \in \{0, 1\}^* \mid \text{the number of } 0\text{'s in } w \text{ is divisible by three}\}$
4. $L = \{a^n b^m \mid n \geq 1, m \geq 1, nm \geq 3\}$
5. $L = \{w \in \{0, 1\}^* \mid w \text{ has exactly one pair of consecutive zeros}\}$

Problem 3 (10pts) Convert the following regular expressions to finite automata (ϵ -NFA):

1. $ab^*aa + bba^*ab$
2. $(a + b)^*b(a + bb)^*$

Problem 4 (10pts) Find an ϵ -NFA that accepts language $L(ab^*a^*) \cap L(a^*b^*a)$.
of two automata.

Problem 5 (15pts) Suppose h is a homomorphism. Are the following statements true? If so, prove it, otherwise give a counter-example.

1. $h(L_1 \cup L_2) = h(L_1) \cup h(L_2)$
2. $h(L_1 \cap L_2) = h(L_1) \cap h(L_2)$
3. $h(L_1 L_2) = h(L_1)h(L_2)$

Problem 6 (30pts) Use the pumping lemma and prove that the following languages are not regular.

1. $L = \{0^i \mid i \text{ is a prime}\}$:
2. $L = \{ww \mid w \in \{0, 1\}^*\}$
3. $L = \{w \in \{a, b\}^* \mid n_a(w) = n_b(w)\}$ ($n_a(w)$ and $n_b(w)$ denote the number of a 's and b 's in w , respectively)
