

COSE212: Programming Languages

Lecture 0 — Course Overview

Hakjoo Oh
2024 Fall

Basic Information

Instructor: Hakjoo Oh

- **Position:** Professor in CS, Korea University
- **Expertise:** Programming Languages, Software Engineering
- **Office:** 616c, Science Library
- **Email:** hakjoo_oh@korea.ac.kr
- **Office Hours:** 1:00pm–2:00pm Mondays (by appointment)

TAs:

- Junyong Heo (heo1569@korea.ac.kr)
- Jiho Shinn (tswlgh0801@gmail.com)
- Use blackboard for questions

Course Website:

- <https://pr1.korea.ac.kr/courses/cose212/2024/>
- Course materials will be available here.

About This Course

This is not an introductory course on programming.

- You will not learn particular programming languages

- You will not learn how to write programs in those languages

Instead, in this course you will learn

- how programming languages are designed and implemented
- fundamental principles of modern programming languages
- thinking formally and rigorously

To succeed in this course, you must

- have basic programming skills
- be familiar with at least two PLs (e.g., C, Java)
- have taken Theory of Computation, Discrete Math, etc
- be prepared to learn new things

Design and Implementation of Programming Languages

You will learn programming language concepts by designing and implementing our own programming language system.

- We will define a programming language. For example, “factorial” is written in our language as follows:

```
let x = read in
letrec fact(n) =
  if iszero n then 1
  else ((fact (n-1)) * n)
in (fact x)
```

- We will design and implement an interpreter for the language:

Program \rightarrow Interpreter \rightarrow Result

- We will design and implement a type checker for the language:

Program \rightarrow Type Checker \rightarrow Safe/Unsafe

Functional Programming

The secondary goal of this course is to be familiarized with functional programming, which encourages using pure functions rather than making side effects.

- Functional programming is one of the major programming paradigms adopted in modern programming languages such as Python, JavaScript, C++, Java8, Scala, Go, etc.
- In this course, you will learn functional programming with OCaml¹ and use it to implement programming languages.

¹<https://ocaml.org>

Topics

- **Part 1 (Preliminaries):** inductive definition, basics of functional programming, recursive and higher-order programming
- **Part 2 (Basic concepts):** syntax, semantics, naming, binding, scoping, environment, interpreters, states, side-effects, store, reference, mutable variables, parameter passing
- **Part 3 (Advanced concepts):** type system, typing rules, type checking, soundness/completeness, automatic type inference, polymorphic type system, lambda calculus

Course Materials

- Self-contained slides will be provided.
 - ▶ You are required to attend every class (otherwise, it'd be difficult to catch up)
- Hakjoo Oh. Introduction to Principles of Programming Languages. (pdf will be provided)

Grading

- Homework assignments – 60%
 - ▶ 3–4 programming assignments
 - ▶ No late submissions will be accepted.
- Final exam – 30%
- Attendance – 10%

Assignment Policy / Academic Integrity

- **All assignments must be your own work.**
- Discussion with fellow students is encouraged and you can discuss how to approach the problem. However, your code must be your own.
 - ▶ Discussion must be limited to general discussion and must not involve details of how to write code.
 - ▶ You must write your code by yourself and must not look at someone else's code (including ones on the web).
 - ▶ Do not allow other students to copy your code.
 - ▶ Do not post your code on the public web.
- **Cheating (violating above rules) gets you 0 for the entire HW score.**
 - ▶ We use automatic technology for detecting clones

Programming in ML

- ML is a general-purpose programming language, reflecting the core research achievements in the field of programming languages.
 - ▶ higher-order functions
 - ▶ static typing and automatic type inference
 - ▶ parametric polymorphism
 - ▶ algebraic data types and pattern matching
 - ▶ automatic garbage collection
- ML inspired the design of modern programming languages.
 - ▶ C#, F#, Scala, Java, JavaScript, Haskell, Rust, etc
- We use OCaml, a French dialect of ML:
